

Salem Electric Cares About

the Environment *and provides a free program to educate 5th grade students of the importance of energy conservation and electrical safety.*

Most people don't think about where electricity comes from or how it's generated, we just flip the switch and the light comes on. Salem Electric has a long-time commitment to energy conservation which allows us to delay the need to build additional power plants for our growing society's energy needs. Over 90% of the power Salem Electric purchases is from renewable resources, but the demand for additional power continues.

By educating our children to conserve energy and to use it wisely at a young age, their habits will be influenced throughout their lives.

There is also a presentation available for second graders which focuses on electrical safety using an energized model display board with miniature buildings and power lines.

This program generates enthusiasm and excitement!
If you would like to schedule a demonstration at your school,
please contact our Member Services Department
at 503 362-3601.

Program Information

- Ideal for 5th graders, this energy conservation and electrical safety program is presented by Salem Electric employees with hands-on examples of equipment and an electricity safety video.
- The presentation lasts approximately 45 minutes and is best suited to groups of 40 students or less. However, we would be happy to work with you to arrange demonstrations so all interested students can attend.

Our Safety Team:

*Experienced &
Knowledgeable*

Our team of presenters combine their personalities, knowledge and skills to communicate with students to provide a valuable educational experience.
